The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply			
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on June 17, 2005 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 105-111,113,118,121-125,148,150,152-156,162-166,168 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeBaryshe et al in view of Ina. DeBaryshe et al disclose an optical system for analyzing tissue including means for illuminating and collecting optical radiation in a substantially confocal configuration. The illuminating means and detecting means includes arrays and moveable mirrors and field stops as set forth in the claims. DeBaryshe et al fails to specifically disclose the specific type of field stop used. Ina is just one example of many which discloses the use of a field stop which comprises a liquid crystal device (column 3, lines 32-33). It would have been obvious to one skilled in the art to have modified DeBaryshe et al such that the field stops used comprise liquid crystal devices. Such a modification merely involves the substitution of one known type of field stop for another.

Claims 105-107,109,110,115,125,126,150,152-156,159-160,162,165-167 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zavislan ('852) in view of Ina. Zavislan discloses an optical system for diagnosing tissue using a confocal

illuminating and detecting arrangement. Zavislan discloses an optical system for diagnosing tissue using a confocal illuminating and detecting arrangement. The sheath can comprises the elements shown in figures 9-11 which prevent the imager 83 from contacting the tissue. The sheath is capable of being used only a single time and can be disposed of. The imager used in the apparatus of Zavislan is disclosed as that of US Patent No. 5,788,639 which includes beam splitters/mirrors which are moveable with respect to the patient. Zavislan et al disclose that cervical tissue can be examined. It is well known to access the cervical tissue using equipment such as an endoscope, laproscope etc in order to provide a non-invasive type of device. The use of such would prevent additional harm from coming to the patient by avoiding surgical intervention and would therefore have been obvious to one skilled in the art. in the art. It would have been obvious to one skilled in the art that the apparatus of Zavislan would have been applicable to any tissue type. With respect to claims 121, 162, the specific field stop dimension used would have been an obvious design choice of known equivalents in the art. Having the tissue not be surgically exposed does not add patentable weight to the apparatus claims. Zavislan fails to specifically disclose the specific type of field stop used. Ina is just one example of many which discloses the use of a field stop which comprises a liquid crystal device (column 3, lines 32-33). It would have been obvious to one skilled in the art to have modified Zavislan such that the field stops used comprise liquid crystal devices. Such a modification merely involves the substitution of one known type of field stop for another.

Claims 108,111,113,118,119,123,148,168 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zavislan et al ('852) in view of Ina as applied to claims 105,107 above, and further in view of Kittrell et al. Zavislan discloses an optical system for diagnosing tissue using a confocal illuminating and detecting arrangement. Zavislan fails to disclose comparing the data obtained to a standard and the use of moveable mirrors to scan the tissue. It is well known in the medical art to obtain data from a tissue region and compare the data to at least one standard in order to properly diagnose the tissue region being tested. An example of such is seen in Kittrell et al. Kittrell et al

Art Unit: 3737

disclose a method of optically analyzing tissue. Kittrell et al disclose illuminating the tissue using an optical assembly comprising moveable mirrors to focus the light on different regions of tissue. The structure set forth in claim 118,119 is seen in figure 23, elements 68,70. It would have been obvious to one skilled in the art to have further modified Zavislan such that the data obtained is analyzed by comparing such to a known standard in order to provide a diagnosis of the tissue being tested. Furthermore, it would have been obvious to have scanned the tissue sample by using moveable mirrors rather than mechanically translating the imager. Such a modification involves the substitution of one known type of scanning means for another. With respect to claim 121 and 162, the specific field stop dimension used would have been an obvious design choice of known equivalents in the art.

Claims 116,117,122,124,163,164 rejected under 35 U.S.C. 103(a) as being unpatentable over Zavislan ('852) in view of Ina and Kittrell et al as applied to claims 108, 152 above, and further in view of Raz. Raz discloses a confocal imaging system which uses an array of emitters and detectors in order to scan a large region of interest. It would have been obvious to one skilled in the art to have further modified Zavislan such that an array of detectors is used in order to scan a larger region of interest in a short time period. Inasmuch as Zavislan discloses the use of optical devices, the array of detectors would require the use of optical elements and processors. The use of an array of detectors and emitters would result in an array of field stops.

Response to Arguments

Applicant's arguments with respect to claims 105-111,113,115-119,121-126,148,150,152-156,159-160,162-168 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 3737

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ruth S. Smith whose telephone number is 571-272-4745. The examiner can normally be reached on M-F 7:30 AM-4:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian Casler can be reached on 571-272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
